

**McCULLEY**  
Vision Therapy

**RELEASE FORM**

At McCulley Vision Therapy our doctors specialize in the diagnosis and treatment of functional vision problems. It is different from the exams done at McCulley Optix Gallery. At the Vision Therapy clinic we do not do general eye health examinations. Therefore, we require that the patient have an eye health examination prior to the vision therapy testing. This can be done either with Dr. McCulley at the Optix Gallery general eye clinic, or at your own optometrist's office. It is strongly recommended that all patients have a thorough eye health examination done at least once per year by an optometrist or ophthalmologist.

I understand that the doctor will not be assessing my child's eye health in the course of the vision therapy evaluations and follow-up exams. I further understand that I must return to my primary care optometrist for yearly examination and any emergency examinations, including red eye appointments.
